

Commerce Console validation report

A developer-ready record of the automated instrumentation result, project build blocker, evidence, and recommended next actions.

4/4 checks passed
1 approved command failed; 6 workspace files were changed by the approved task.

APPLICATION	Commerce Console
ENVIRONMENT	Development
ADAPTER	react-vite 1.0.0
TASK ID	8154ad93-6f5a-4ea5-a1a3-e54db6c52b48
GENERATED	15/08/2026, 13:34:17
STATUS	VALIDATION_FAILED

Executive assessment

Tellann applied the reviewed instrumentation scope and completed its structural SDK checks. The attached application then failed an approved project command. The evidence below separates the project before-state, Tellann changes, current state, and observed blocker.

Current state of the project

This section describes the evidence available after Tellann applied the reviewed task and ran validation. It does not infer the health of files or services that were outside the approved scope.

PLAN STATUS	VALIDATION_FAILED
VALIDATION	Tellann structural checks passed
PROJECT BUILD	Blocked by approved command failure
FILES CHANGED	6
PATCH APPLIED	15/08/2026, 13:34:17
DIFF HASH	ccc
CHECKPOINT ID	8eca046d-4fac-44e5-8867-32bd4436c13a

Current approved-file manifest

[illegible]

Current validation evidence

PASS	sdk-dependency @sots/frontend-sdk is declared
PASS	generated-config src/tellann.ts
PASS	idempotency-markers No duplicate generated markers
PASS	project-build-warning Tellann checks passed; the application build has unrelated TypeScript errors.

Previous state of the project

This is the captured state immediately before Tellann wrote the approved instrumentation. File contents and raw diffs remain encrypted locally; the report uses hashes and checkpoint metadata to preserve privacy while supporting comparison and rollback.

BASE REVISION	43db77c2d094f05e6a81e190da315781499a1f22
REPOSITORY FINGERPRINT	7b507623341ac588dd910def24a5347af3c2edfbf9747df79693ec1f9bc92be4
CHECKPOINT TYPE	GIT_BRANCH
PREVIOUS BRANCH	main
CHECKPOINT BRANCH	tellann/instrument-20260815T132000Z-a3f912
WORKTREE DIRTY	YES - pre-existing changes were present
CHECKPOINT CREATED	15/08/2026, 13:34:17
CHECKPOINT NOTE	No exception recorded

Before-state approved-file manifest

[illegible]

What Tellann tried to do in the workspace

Tellann attempted only the files and commands shown during the reviewed approval. It did not have permission to repair unrelated application code.

Risk classification: MEDIUM

Semantic workflow-entry checkpoints modify explicitly listed functions

Requested dependency changes

dependency	@sots/frontend-sdk ^0.1.0
------------	---------------------------

Approved code and configuration operations

UPDATE_PACKAGE	package.json Apply the reviewed Tellann change to package.json
UPDATE_PACKAGE	package-lock.json Apply the reviewed Tellann change to package-lock.json
CREATE_FILE	src/tellann.ts Create the Tellann SDK configuration and correlation module
UPDATE_SOURCE	src/main.tsx Apply the reviewed Tellann change to src/main.tsx
CREATE_FILE	.env.local Apply the reviewed Tellann change to .env.local
UPDATE_SOURCE	.gitignore Apply the reviewed Tellann change to .gitignore

Approved commands and recorded results

PASS	Install @sots/frontend-sdk ID: install-sdk Exit: 0 Duration: 4021 ms
FAIL	Validate the instrumented application build ID: validate-build Exit: 2 Duration: 12890 ms

What ended up happening

The source integration, dependency resolution, generated configuration, file hashes, and idempotency checks were recorded. An approved project command then returned a non-zero exit code. The categorized and raw sanitized evidence follows.

Diagnostic breakdown

Missing or incompatible properties	2
Unused code	1
Type and nullability problems	1
Invalid comparisons or enums	1

Failed command diagnostics

Validate the instrumented application build	EXIT 2
<pre>src/pages/admin/StoreManagementPage.tsx(199,67): error TS2339: Property 'isActive' does not exist on type 'Store'. src/pages/CartPage.tsx(16,61): error TS2339: Property 'cart' does not exist on type 'RootState'. src/pages/auth/MerchantLoginPage.tsx(6,59): error TS6133: 'ArrowLeft' is declared but its value is never read. src/pages/CheckoutPage.tsx(71,32): error TS7006: Parameter 'item' implicitly has an 'any' type. src/pages/LoginPage.tsx(132,33): error TS2367: This comparison appears to be unintentional.</pre>	

No ingestion key, authentication token, raw environment value, absolute workspace path, or raw source diff is included in this report.

Tips on how to resolve it

1. Start with the first compiler error in each affected module; later errors may be cascading consequences.
2. Align frontend models with the current API contracts, including missing properties, nullable fields, and enum values.
3. Restore missing service exports and state slices before addressing components that consume them.
4. Remove genuinely unused imports and variables, or change TypeScript policy only through the project review process.
5. Run the same approved build command directly in the package root until it exits successfully.
6. Do not remove Tellann generated markers or environment configuration while resolving unrelated project errors.

Permission boundary

Tellann will not automatically edit the unrelated files named in compiler diagnostics. Any assisted repair should be a new proposal listing exact files, intended edits, commands, checkpoint behavior, and rollback conditions for explicit approval.

Next steps after resolution

1. Commit or checkpoint the developer fixes according to the project workflow.
2. Return to this instrumentation task and select Re-run build and Tellann checks.
3. Confirm the project build passes and the SDK still resolves.
4. Start the approved application process and wait for the SOTS_ONBOARDING_TEST event.
5. Confirm the target is verified in both Tellann Desktop and the web connection summary.
6. Run the first walkthrough and attach this report, plus the successful follow-up result, to the QA handoff.

Tellann QA evidence report - generated locally by Tellann Desktop. Raw source changes remain on the attached device. This report was generated for engineering communication and project documentation.
